

Plan

Goal: Help users prepare for successful workouts before they arrive at the gym.

Workout Templates

- Create custom workout templates
- Edit templates
- Duplicate templates
- Delete templates
- Organize templates (Push, Pull, Legs, Upper, Lower, Full Body, Custom)

Workout Planning

- Weekly planner
- Calendar view
- Schedule workout templates
- Create one-off workouts
- Rearrange workouts
- Rest days

Workout Streaks

- Current streak
 - Longest streak
 - Weekly goal
 - Monthly workouts
-

Train

Goal: Make it as easy as possible to track, execute, and adapt workouts while at the gym.

Workout Tracking

Track:

- Exercises
- Sets
- Reps
- Weight
- Set type
- Completed sets

Set Types

- Warm-up
- Working
- Failure
- Drop Set
- AMRAP
- Assisted

Workout Editing

Once a workout has been started, users should be able to modify workouts at any point. If the workout was started from an existing template, this should not impact the original template. The workout will be logged as a new instance for the current day.

Examples:

- Swap exercises
- Skip exercises
- Reorder exercises
- ~~Add exercises~~
- ~~Remove exercises~~
- ~~Modify weight~~

Example:

Leg Press is occupied → Replace with Hack Squat.

Quick Actions

Reduce typing wherever possible.

Examples:

- Repeat last weight
- Repeat previous workout
- +2.5

- +5
- +10

Notes

Allow notes at multiple levels.

Workout Notes

- Overall thoughts from today's workout

Exercise Notes

- Shoulder bothered me
- Increase weight next week
- Didn't like this variation

Machine Settings

Save exercise-specific setup information. Show reminders as you are going to track.

Examples:

- Seat position
- Bench angle
- Cable height
- Foot placement

Exercise History

When logging an exercise, quickly display:

- Last workout
- Best weight
- Best reps
- Previous notes

This removes the need to remember what you did last time.

Train - track workout mock up

Review

Goal: Capture how the workout felt while it's still fresh.

Workout Reflection

Immediately after workout:

- Workout rating
- Energy level
- Difficulty
- Notes

Next day:

- Muscle soreness
 - Recovery
 - Fatigue
 - Motivation
-

Progress

Goal: Show long-term improvements and trends.

Strength Trends

For every exercise:

- Estimated 1RM
- Best weight
- Average weight
- Average reps

Volume Tracking

By muscle group:

- Chest
- Back

- Legs
- Shoulders
- Arms

Measurements

Track:

- Body weight
- Waist
- Chest
- Arms
- Legs

Workout Analytics

- Average workout duration
 - Longest workout
 - Average rest time
 - Average exercises
 - Average sets
-

Integrations

- Apple Health
- Apple Watch
- Oura
- WHOOP

Future

- AI Workout Generation
 - Generate workouts based on:
 - Target muscle groups
 - Available equipment
 - Workout duration
- AI coaching
- Progressive overload suggestions
- Plateau detection

- Exercise recommendations
- Deload suggestions
- Smart recovery recommendations
- Progress photos (in measurements)
- Highlight undertrained muscle groups (volume tracking)
- Allow for supersets
